

Dear Baxter,

I am a computer science graduate from The University of Texas at Austin, who took a two-year break to start a family, and I'm looking to begin my professional career.

I think I would be a great fit for the Quality Assurance Intern position at Baxter. I have plenty of Java programming experience through the many projects I've worked on in school, one of which was an implementation of the AES block cipher encryption algorithm. Also, I have some experience with AWS as I used it to store and retrieve data for my current project, Kado. I am eager to start my career and apply what I've learned in school. I enjoy finding the best solution to problems and making things, whether it's with code or not.

Please do not hesitate to let me know if you need any additional materials or have any questions. Thank you for your time and consideration.

Sincerely,

Sherley Jones
